### **HVACR students tour Meijer's**

On April 4, 2005, the Commercial Refrigeration Class, taught by HVACR Professor John Tomczyk, took a trip to the local Meijer's store to view different types of the rooftop systems and refrigeration units students have been studying in class.

During the tour students were able to view and study the latest technology in supermarket refrigeration. They also toured through the mechanical room to view an Einstein control system operating with twin parallel compressor racks, rooftop air conditioning and heating systems, building lighting, and overall energy management systems.

Professor John Tomcizk led the tour and comments, "This tour will enable students to know the complexity of commercial refrigeration and air conditioning systems."
