

Master check list information

I. Overview

The project manager's master check list is designed for those involved with, or responsible for, directing, managing, planning, scheduling, expediting or closing out construction projects. It is also intended for the use of planning, programming and design professionals whose work results in the ultimate construction of a facility or the improvement of the physical environment.

As your comments are received, and as the check list sees use on actual projects I shall further elaborate on each of the five major generic work phases use presently. These are front end work (fen), programming (pgm), designing (des), constructing (con), and following up (fol).

Additions to the work phase list will be made as they are suggested and appear useful and appropriate for achieving the major uses of the check list.

In the material below the comment "(see record number xx in master pm check list)" refers to the data run entitled "Master pm check list - listed by data type, seq, action" - dated March 11, 1996.

II. Background

The pm master check list originated as a tabulation of construction activities that might be encountered in the network planning of a development, design, or construction project. As the list has been used by various practitioners items have been added, and the use of the list has been expanded. It can be used for making selective runs by:

- work phase
- csi codes
- general information
- responsibility codes
- submittal requirements
- who is responsible
- who is doing the work
- who is in charge
- who is liable
- target dates
- actual dates
- etc,

III. Format for data runs

A. Fields as of 03/11/96

1. Data type - describes the use of the record in relation to the management of the project of which it is a part.
 - a) abbreviations (abb)
Key abbreviations used for descriptive purposes - limited where possible to three characters.
 - b) action (act)
The basic name and description of what is being identified in the key fields.
 - c) participants (par)
The individuals or organizations responsible for carrying out the activities on the project. Usually participants will be designated by a specific code number as they become part of the project team.

2. Sequence # - describes the work phase by number when the action, subject or meaning occurs or is used in the project line of action.
The sequence # identifies the places in the general sequence of work in which design and construction professionals often visualize actions occurring in an improvement program.

a) 01 - gen - general information about the project

Usually used to classify data that does not fit into other work phases (fields). An example of an important general category is the list of abbreviations shown in records 1 through 58 in the master check list.

b) 02 - fen - front end work

Work which must or should occur very early in any given phase of the project and usually before the main operations of the work phase begin. For instance checking land ownership to determine if the project can be built on the site is usually a front end activity that must be done as or before detailed programming or design work starts (see record number 63 in master pm check list).

c) 03 - pgm - program work

The program writing phase defines a step in the design process where a narrative oriented statement is prepared describing the needs and character of the proposed user operation, the requirements of the user and owner, the nature of the environment to be planned, designed and built, and the corresponding characteristics of the space that will satisfy these needs and requirements. Sometimes the program is called the brief.

Often an action item normally encountered during the program phase will have to be deferred until the design phase because adequate information is not available at the earlier program phase. For instance reciprocal easements at a site may not be totally defined until some design and possibly construction begins (see item 89 in the master check list).

d) 04 - des - design work

The phase of work where detailed design studies and construction documents are prepared. The end product of the design work is a full set of contract documents from which the project can be built for the cost, within the time, and to the quality required by the proforma cost analysis and the project program.

- (1) 04.01 - sch - schematic design
- (2) 04.02 - ddv - design development
- (3) 04.03 - pcd - preliminary construction documents
- (4) 04.04 - fcd - final construction documents
- (5) 04.05 - caw - construction contract award

e) 05 - con - construction work

The process of converting a concept and its related plans and specifications into an actual physical environment in accordance with the program and the design requirements.

Usually the construction work phase can be broken in to several well defined parts of the building or environment. These might include the items listed below. Building parts are designated in the master pm check list as components and are defined in the component field or column (cmpt).

- (1) 05.01 - caw - construction contract award
- (2) 05.02 - gcr - general conditions
- (3) 05.03 - siw - site work

- (4) 05.04 - sbw - substructure work
- (5) 05.05 - ssw - superstructure work
- (6) 05.06 - esk - exterior skin work
- (7) 05.07 - irw - interior rough work
- (8) 05.08 - ifw - interior finish work
- (9) 05.09 - usy - unit systems work
- (10) 05.10 - clo - close out work
- (11) 05.11 - war - warranty work

f) 06 - fol - follow up work

A category of work that occurs as the project nears completion and occupancy, or following total completion of the project and during turnover, occupancy, and operation of the facility. This list of items is limited to very few items in the pm check list and most often are designated at close out items (clo) in the component (cmpt) column. No major list of follow up work is given in the present master check list.

3. Action, subject or meaning - describes what major element is being defined by the codes within the line item description (record).
4. CSI code - describes the master spec section in accordance with the generic spec section to which the work is assigned by the CSI and most other major information providers.
5. Work phase - describes the work phase as identified by number and abbreviation (similar to the sequence # above) identified in column format by x under the field and in the action record. See above under sequence # for descriptions of material.

Note: this is a redundant set of data and duplicates the data shown in the sequence # column described above. However the display is in specific column format to allow for direct searches on a given work phase. It is an alternate way of showing phase data.

- 01 - General (gen)
- 02 - Front end work (fen)
- 03 - Program (pgm)
- 04 - Design (des)
- 05 - Construction (con)
- 06 - Follow up (fol)

6. Work phase (wk phse) - describes the work phase as identified by abbreviation (similar to the data fields described under item 1 and 5 above).

Note: this is a redundant set of data being shown to allow several methods of searching on base data.

7. Component of project (cmpt) - provides supplementary information about actions, subjects or meanings

Note: some redundant data is shown in this field. Non redundant data is further detail about sub components of the record actions, subjects and meanings.

IV. Data base classifications - preliminary

A. Work phase - the phase of work in which action is taking place (x axis of matrix) - in approximate order in which the work takes place

1. ccv - conceive
2. pgm - program
3. apv - approve
4. des - design
5. con - construct
6. tov - turn over
7. opr - operate

8. mtn - maintain

9. war - warranty period

B. Project component - why, where, and/or when the action is taking place (cmpt)

1. aba - abatement work
2. adm - administrative work
3. cde - code and ordinance work
4. clo - close out work
5. con - construction work
6. cos - cost & estimating work
7. cot - contracts work
8. cst - costing work
9. ctr - contract preparation & execution work
10. dem - demolition work
11. des - design work
12. eas - easement work
13. env - environmental work
14. esk - exterior skin work
15. fen - front end work
16. fin - finance work
17. frw - front end work
18. gcr - general conditions & requirements work
19. ifw - interior finish work
20. ins - insurance
21. irw - interior rough work
22. isp - inspection work
23. mgt - management work
24. mkt - marketing work
25. ofs - off site work
26. ons - on site work
27. pas - planning & scheduling work
28. per - permitting work
29. pgm - program work
30. pro - procurement work
31. reg - regulatory work
32. rep - reporting work
33. res - real estate work
34. sbw - substructure work
35. sit - site work
36. siw - site work
37. ssw - superstructure work
38. sub - submittal work
39. tes - testing work
40. trf - traffic related work
41. usy - unit systems work
42. utl - utility work
43. ven - value engineering
44. war - warranty work
45. zon - zoning work

C. Discipline - those doing the work (y axis of matrix)

1. apv - approval
2. arc - architecture
3. con - construction
4. eas - easements
5. eng - engineering
6. env - environmental
7. est - estimating or costing
8. fin - financing
9. lea - leasing
10. leg - legal
11. mkt - marketing
12. per - permitting
13. plg - planning
14. pma - property management
15. reg - regulator
16. res - real estate
17. sal - sales

D. Submittal type - the type of submittal to be provided to those in charge - note this field is not shown on the enclosed check list but should be added to the working check list for the project.

1. bos - Buy out sheets
2. cbo - Color boards
3. cut - Cuts
4. mup - Mock ups
5. sam - Samples
6. shd - Shop drawings

Master pm check list - listed by data type, seq, action
