

Appendix B

Exposure Determination by Job Classification

All of the following job classifications require Staff and Student Employees to perform procedures or occupation-related tasks that involve exposure, or the potential for exposure, to blood or other potentially infectious material, or that involve a potential for spills or splashes of blood or other potentially infectious material, are included in this exposure determination.

Department/Program	Position	Activity with Potential Exposure
Dental Hygiene	Faculty and Staff of Dental Hygiene Facilities and Clinical Operations	Instruction and supervision of students performing teeth cleaning, x-ray and cleaning of contaminated instruments and equipment, handling biohazardous waste
Dental Hygiene	Faculty, Staff, Student Employees	Cleaning of contaminated instruments and equipment, handling biohazardous waste
Dental Hygiene	Dental Hygiene Facilities Coordinator, Dental Hygiene Students, Student Employees	Contaminated instruments and equipment
Medical Imaging	Faculty and Staff	Instruction and supervision of students giving I.V. injections, handling biohazardous waste
Medical Imaging	Service Technician	Contaminated equipment

The following body fluids are not expected to be infectious sources of bloodborne pathogens unless they are visibly contaminated with blood:

- Urine
- Feces
- Vomit
- Tears
- Sweat
- Sputum
- Nasal Secretions

Faculty, Staff and Student Employees who do not perform the activities listed above where there is potential exposure are classified as Category B.
